

5 Ways RFID Improves Efficiency & Accuracy

Connect data from door to dock with Barcoding and Zebra.

There are over
1.2 MILLION

dock doors across North America,
with thousands of orders streaming
through the supply chain

However, when a dock door
becomes a choke
point, operations
fall prey to...

Inaccurate inventory
counts

Missed delivery
timeframes

Overstocking and/or
out-of-stocks

Scanning errors that
increase TCO

That's where intelligent RFID comes in.

- **Scan materials automatically** as they pass through RFID portals at the shipping/receiving dock.
- **Track inventory movement** with Zebra MotionWorks and supporting RTLS technologies
- **Equip workers** with automated data capture to speed up accurate cycle counting, pick-pack, receiving, and shipping
- **Orchestrate smoother picking** and material movement with Zebra FulfillmentEdge and Fetch Robotics
- **Ensure final hands-free order verification** when items are scanned automatically as they leave the facility

Maximize Your RFID Investment

with the Benefits of Zebra Solutions:

Set-up
assistance

Tested
durability

Repeatable
tuning and
configuration

Scalable to
your facility

From readers, to RFID tags, to printers, level up operational visibility

with sensing technology developed for maximized accuracy from door to dock.
Contact Barcoding to learn you can maximize efficiency in your operations.
